

## CERAMIC CLOTH – TECHNICAL DATASHEET (3 MM x 1 MTR)

Ceramic Cloth is a high-performance thermal insulation material made from ceramic fiber yarn reinforced with fiberglass. It is designed for extreme temperature applications where conventional insulation materials fail.

| Parameter              | Specification   |
|------------------------|-----------------|
| Material               | Ceramic Fiber   |
| Thickness              | 3 mm            |
| Width                  | 1 Meter         |
| Roll Length            | 10 to 30 Meters |
| Temperature Resistance | Up to 1000°C    |
| Reinforcement          | Fiberglass      |
| Color                  | White           |
| Form                   | Roll            |

### Applications:

- Furnace insulation
- Pipeline wrapping
- Water-cooled cable protection
- Heat shields and fire barriers
